High-Grade Comes to Surface. Where Shafts Are Being Sunk.

That large bodies of direct smelting ore will be opened in the Monarch and Elmer claims of the Ely Central Copper company, where the sinking of shafts is under way, is freely predicted by Ely experts. High-grade ore comes to the surface in those places, it is said, and considerable of it was gouged out years ago by searchers for gold.

The report of Colonel Farish, who made an examination of Ely Central ground six weeks ago, advised going to work on this ground, and predicted that the Elmer, Monarch and Josie claims would develop into big producers of direct smelting ore.

Work in these shafts now under way will develop the property at the southeast end, the northwest and in the center of the big estate, says the Ely expert. The shaft on the Eureka fraction, at the southeast end, is in very soft ground, heavily stained with iron oxide.

Consulting Engineer Edward Hoffman says that they will be in the ore of the Nevada Consolidated within sixty days. The judgment of the engineer is backed by the recent development on the pit of the Nevada Consolidated, which shows the Eureka fraction.

During the week a churn drill was put to work 180 feet east of the ore in the pit, and at a depth of 175 feet the ore was encountered. The hole is now 215 feet down and in ore from the 175-foot level.

The Nevada Consolidated is rushing the work in the pit toward the Ely Central ground, four of the five steam shovels of the company are engaged on the east side of the pit, two working in the overburden and two in the ore. Surveys for the railroad tracks on the ground between the present eastern side of the pit and the side of the Eureka fraction have been made, and the work to be carried on there will bring the pit 200 feet closer to Ely Central ground.

NEW FURNACE BLOWN IN.

Nevada Consolidated Output to Be Further Increased.

Ely, Nev., Oct. 14.—Four reverberatory furnaces are now in commission at the plant of the Nevada Consolidated Copper and Mining company, where the ore mined by the Nevada Consolidated at Copper Flat is being smelted. The plant stands of converters are also being employed to give the finishing touches to the product from the converters before it is ready to be shipped to the eastern refineries where it is still further purified and the precious gold taken from it.

The increased capacity of the furnaces and converter departments will permit the plant to turn out a larger amount of blister copper during the present month, which promises to be a record breaker, and the total will likely exceed 6,000,000 pounds. Nearly 2,000 men are employed at the great reduction works in all departments and the payroll for the month of September was close to \$200,000.

San Francisco Quotations.

Several Assessments Due.

The Mineral Flat company's assessment of 1 cent a share became delinquent yesterday, as did the East Tintic Gold King assessment of one-half cent a share. The latter's assessment of 1 cent became delinquent today, and that of the Lower Mammoth of 5 cents must be paid the 16th to escape penalty.

Some Good Buying, but Issues Refuse to Move Either Way.

The mining stock market yesterday stopped as nearly as possible upon a dead level. There was some trading of apparently good character, but neither demand nor offering was sufficiently pressing to move an issue appreciably either way. Positively no news calculated to affect any issue was about Iron Blossom sold at 90 cents to 94 cents and closed at 92 cents. Sioux Consolidated was active at 88 cents to 90 cents and closed at 89 cents. There was some trading in Grand Central at \$2.20 to \$2.15. Columbus Consolidated was quiet at 88 cents to 90 cents and closed at 89 cents. Shares sold, \$3,612. Value, \$25,140.25. Closing quotations and the day's sales:
